

HYDRAULIC MAGNET THUMB

Introducing the newest Moley innovation, arriving late 2026.

The Moley Hydraulic Magnet Thumb is a heavy-duty add-on designed to transform our Fully Enclosed Hydraulic Claw Magnet into a three-purpose material handling solution: a magnet, a claw and a hydraulic thumb. Built for demanding rail, demolition, and scrap applications, the Magnet Thumb helps crews recover more material, sort faster, and reduce the need for additional attachments or machines.

- Reduce the need for attachment change-outs
- Avoid using a grapple for non-ferrous handling in many applications
- Eliminate the need for a second machine dedicated to sorting/cleanup
- Boost productivity and throughput with this all-in-one tool

COMPATIBILITY

Designed to integrate with a wide range of excavators and material handlers, the Moley Hydraulic Magnet Thumb is installed using a dedicated auxiliary hydraulic line for thumb operation. It works seamlessly with standard joystick or accessory controls, allowing operators to use familiar inputs without additional training.

USAGE

Ideal for scrap yards, rail maintenance, demolition, and mixed-debris cleanup, the Magnet Thumb enables operators to scrape, sort, and lift ferrous and non-ferrous material in a single workflow. It reduces attachment swaps and supports faster, cleaner material handling across demanding jobsite conditions.

WARRANTY

Our warranty protects against defects in materials and workmanship. Built to last and designed to perform, every Moley Magnetics product is backed by our commitment to quality.

KEY FEATURES

- 3-in-1 attachment: scrape, sort, and magnet pickup
- Integrated teeth expose and recover more ferrous material
- Hydraulic thumb for removing non-ferrous debris
- Standalone magnet operation when needed
- Intuitive joystick/auxiliary control operation
- Dedicated hydraulic thumb circuit for smooth positioning
- Improves load cleanliness and job site efficiency
